

Graduate Program in Biomedical Anthropology

Binghamton University (SUNY)

Opening New Frontiers

The Master of Science degree in biomedical anthropology is an innovative, interdisciplinary program that prepares individuals for a variety of health-related fields by addressing the increasing need for versatile professionals in both biomedicine and public health.

Training and Research

The program's research facilities provide teaching, training, and research opportunities for students and faculty, as well as to those collaborating with the program. Community, national, and international based studies, research, and fieldwork opportunities are available to students, including on-site state-of-the-art wet and dry laboratories.

Requirements

Students are required to successfully complete 43 credits of coursework, including a 320 hour internship and an oral examination at the end of the second year. There is no thesis or foreign language requirement. Students with undergraduate or graduate training in all fields of study are accepted. For detailed information on the program, including course requirements, go to:

Fields of Training

- Bioarcheology and skeletal biology
- Chronic and infectious diseases
- Clinical research
- Growth and development
- Human adaptation and evolution
- Molecular anthropology
- Neuroscience
- Paleoanthropology
- Women's health

Research and Facilities

- Anthropometry and physiology lab
- Ancient DNA identification labs
- Forensic DNA identification lab
- General molecular biology labs
- Infectious disease lab (BL3)
- Neuroscience cell culture lab
- Serum archive facility
- Skeletal biology lab

Places we've Worked

- Cambodia
- Caribbean
- China
- Micronesia
- Papua New Guinea
- Siberia
- Ukraine
- United States
- Vanuatu
