

Late Bronze Age populations in Transylvania Osteological survey and workshop Cluj-Napoca, Transylvania, Romania June 5th – July 30th, 2011

By its geographic location, Romania is situated on the main migration axes in and out of Europe. The Transylvanian Depression, being very well bound geographically, became a very dynamic zone of culture synthesis.

This project focuses on the Late Bronze Age Transylvanian component of the Noua Culture known mostly from the study of cemeteries.

The collection being studied is housed by the National Museum of Transylvanian History in Cluj-Napoca. Being the largest and most dynamic city in Transylvania, it is a very lively city, with a plethora of cultural, gastronomical and social

venues. Historical trips to places such as Sighisoara (Dracula's birthplace and an UNESCO heritage site) or nature hikes through dramatic landscapes are just a short bus or train ride away.

This summer's workshop is designed to continue the exhaustive osteological survey as well as to select bones to be brought back for DNA and stable isotope analysis. Students will receive daily an intensive 3h lecture and practical work prior to working on the bones.

Duration:

- 1st session from June 5th to July 2nd
- 2nd session from July 3rd to July 30th

Costs per session: US\$1550

Includes:

- Registration fee 380\$
- Lodging
- Access to the study collection
- Museum registration
- Security clearance
- Teaching material, support and documentation
- Laboratory material (except for Lab coats)
- Lectures: 25hrs/session
